PROJECTS

Aid Management App - C++
- Created an aid management app with the underlying purpose of managing the list of goods needed to distribute aid to a location.
- Applied object oriented programming principles such as inheritance, polymorphism and encapsulation.
- Used modular programming to separate all the tasks into different modules.

Grocery Store App - C
- Created a grocery store app that would house all the products of a grocery store.
- Used knowledge in C to create a robust advance grocery store management system.
- Capable of adding and deleting products, searching for products with detailed format and able to edit products.

MyApp - Node.js
- Created a web app using a combination of front-end and back-end technologies such as node.js with frameworks using express.js and handlebars.js.
- Used java script frameworks to program server and handle different routing requests.
- Application deployed using Heroku's cloud application platform.

Cell City - Website
- Developed a modern and responsive website for a client.
- Used advance techniques in HTML(5) and CSS(3) with FlexBoxGrid framework.
- Website is cross-platform and responsive with easy user interface and sleek design.
